REPORT.

UNITED STATES PATENT OFFICE,
January 23, 1872.

To the Senate and House of Representatives of the United States of America in Congress assembled:

The law requires the Commissioner of Patents to lay before Congress, in the month of January, annually, a report of all receipts and expenditures, a list of all patents granted, with name and subject-matter indexes, and a list of all patents extended during the preceding year, together with such other information of the condition of the Patent Office as may be useful to Congress or the public.

I submit the following report in compliance with this law:

1.—*Statement of moneys received.*

Amount received on applications for patents, reissues, extensions, caveats, disclaimers, appeals, and trade-marks	$612,635 00
Amount received for copies of specifications, drawings, and other papers	47,729 80
Amount received for recording assignments	18,451 66
Total	678,716 46

2.—*Statement of moneys expended.*

Amount paid for salaries		$422,316 02
Amount paid for photographing		45,693 30
Amount paid for contingent and miscellaneous expenses, viz:		
Advertising	$3,062 00	
Stationery	17,204 41	
Tracings, &c	472 85	
Painting, glazing, varnishing, and glass	3,001 20	
File-boxes	1,215 00	
Furniture, carpeting, &c	10,827 05	
Repairing furniture, carpenter's work, and fitting up cases in model-rooms	16,832 04	
Plumbing and gas-fitting	5,752 59	
English patents	1,382 23	
Paper-hanging	1,057 49	
Work on report	1,683 00	
Preparing index of assignments	380 75	
Refunding money paid by mistake	900 00	
Hardware	3,992 70	
Pay of temporary employés	16,187 60	
Miscellaneous items, viz: Books for library, subscriptions to journals, freight, ice, washing towels, fees of judges in appeal cases, withdrawals, purchase of horse and carriage, and livery	11,031 41	
		94,082 32
		562,091 64

3.—*Statement of the balance in the Treasury of the United States on account of the patent fund.*

Amount to the credit of the patent fund January 1, 1871	$643,355 21
Amount of receipts during the year 1871	678,716 46
Total	1,322,071 67
From which deduct expenditures for the year 1871	562,091 64
Balance on the 1st of January, 1872	759,980 03

4.—*Statement of the business of the office for the year 1871.*

Number of applications for patents during the year 1871		19,472
Number of patents issued, including reissues and designs		13,033
Number of applications for extensions of patents		204
Number of patents extended		158
Number of caveats filed during the year		3,366
Number of patents expired during the year		2,654
Number of patents allowed, but not issued for want of final fee		1,007
Number of applications for registering of trade-marks		505
Number of trade-marks registered		486
Of the patents granted there were to—		
Citizens of the United States	12,511	
Subjects of Great Britain	432	
Subjects of France	30	
Subjects of other foreign governments	60	
		13,033

A plate is added showing graphically the business of the office from 1836 to the present time, in such form as to represent to the eye the comparative business of the different years.

The name and subject-matter indexes, giving an alphabetical list of patentees, with their places of residence, are herewith, as part of this report, submitted.

It will be seen by the statements of receipts and expenditures that the Office has received and placed in the Treasury of the United States during the year $116,624.82 more than its entire expenditures. Of the items of expenditure, $47,885.37 was paid to copyists of drawings, to the photo-lithographers, and for paper for the reproduction of drawings of patents issued prior to July 1, 1869. This is an expenditure not properly chargeable to the current expenses of the office, and would, if

added to the balance above stated, make the real excess of receipts over the current expenses for the year, $164,510.19.

The reproduction of the past drawings is absolutely necessary to the proper management of the business of the Office, and is also a matter of great interest and profit to inventors and manufacturers. When once done, the expense of the work will cease, while the Office and the country will forever reap the benefits resulting from it. I would respectfully recommend that liberal appropriations be made for this work, that it may be completed as soon as possible.

The work of the Patent Office will necessarily increase to some extent, although the number of applications for patents may be substantially the same from year to year. Every application for a patent placed on file becomes a reference on which to reject subsequent applications for patents on the same improvements. Each year adds about twenty thousand to the number of these applications, which necessarily increases the clerical and examining labor of the Office.

The joint resolution of January 11, 1871, abolished the old form of annual report of the Patent Office. This resolution was passed in the belief that there was very little public demand for or interest felt in those reports. This belief, I think, was not well founded. There was a wasteful number of those reports printed, and they were, without doubt, injudiciously distributed. The consequence was that the larger portion of them fell into the hands of persons for whom they were not adapted, and soon found their way to rag-dealers and second-hand book-stores. The demand, however, of inventors, mechanics, manufacturers, and others, for accurate information of what is being done in the Patent Office is great and increasing. The old annual reports were unsatisfactory for two reasons: first, because they were always about two years behind date; and, second, because, in furnishing necessarily only ill-advised abstracts of the specifications and drawings, they seldom gave full information of what was covered by any patent, and consequently were very often misleading and deceptive.

These reports, however, with all their defects, were read and studied with great avidity by inventors and mechanics throughout the country, and the perusal of them has undoubtedly resulted in giving to the world very many valuable inventions and improvements. Unless a proper substitute is provided, I am of the opinion that their abolition will cause an abatement of interest in improvements and a diminution of the number of inventions. The inventive genius of one is stimulated and encouraged by seeing the results of the ingenuity of others. One man makes an important invention and obtains letters-patent therefor. If a correct knowledge of this patent can soon be placed in possession of five hundred other ingenious men, many valuable improvements will be suggested and patented, and the public will obtain a comparatively perfect machine, in place of the crude or less perfect production that may have come from the hands of the first inventor. The records of the

Patent Office will show that but comparatively few radical inventions have been practicable or profitable as first invented. It is only after the first thought has been embodied and presented to the world, and improvements to adapt it to the various uses for which it is calculated have been invented, that it becomes of most profit to the original inventor or most useful to the public. The value and importance of giving promptly a wide circulation to correct information of the character of all inventions and improvements patented can hardly be overestimated.

The object of the patent laws, as expressed in the Constitution, is, "to promote useful arts." This is done, in part, by giving inventors a legal monopoly of their inventions for a limited time; but it is of scarcely less importance that each inventor in the country should be promptly, and at small expense, furnished with a knowledge of what all the others are doing. Without such knowledge no one of them can pursue his investigations intelligently or economically. In any one of the useful arts, a knowledge of the present state of that art, of what others have done in it, is essential and necessary to any person engaged in improving it. To furnish this knowledge so far as it is made a matter of record by the Government, is clearly within the scope of the end sought by the establishment of the Patent Office.

In abolishing the old form of annual report, which was very unsatisfactory and expensive, it is questionable whether the law has provided an adequate substitute.

The joint resolution of January 11, 1871, provides as follows:

That the publication of the abstracts of specifications and of the engravings heretofore accompanying the annual report of the Commissioner of Patents be discontinued after the publication of that portion of the report for eighteen hundred and sixty-nine for which the plates have already been prepared; and that in lieu thereof, the Commissioner be authorized to have printed, for gratuitous distribution, not to exceed one hundred and fifty copies of the complete specifications and drawings of each patent subsequently issued, together with suitable indexes, to be issued from time to time, one copy to be placed for free public inspection in each capitol of every State and Territory; one for like purpose in the clerk's office of the district court of each judicial district of the United States, except when such offices are located in State or Territorial capitals, and one in the Library of Congress, which copies shall be taken and received in all courts as evidence of all matters therein contained, and shall be certified to under the hand of the Commissioner and seal of the Patent Office, and shall be taken and received in all courts as evidence; said copies not to be taken from said depositories for any other purpose than to be used as evidence; and the Commissioner of Patents is hereby authorized and directed to have printed such additional number of copies of specifications and drawings, certified as hereinbefore provided, at a price not to exceed the contract price for such drawings, for sale as may be warranted by the actual demand for the same; and the Commissioner is also hereby authorized to furnish a complete set of such specifications and drawings to any public library which will pay for binding the same into volumes to correspond with those in the Patent-Office, and for the transportation of the same, and which shall also provide proper custody for the same, with convenient access for the public thereto, under such regulations as the Commissioner shall deem reasonable.

By this joint resolution one copy each of the specifications and drawings of all patents issued will be placed for free public inspection in

the capitol of every State and Territory, and one copy for like purpose in the clerk's office of the district court of each judicial district, where said clerk's office is not at the capital of any State or Territory. This will give only one copy each to most of the States and Territories, two copies each to a few of the States, and three copies each to a still less number. These State and district court libraries are open only during the business hours of the day, and while they will be very convenient and useful for the courts and for a limited number of attorneys, yet they will prove valueless as far as the great body of mechanics and inventors of the country are concerned. They are practically "sealed books" to nearly all of the class most interested in them, and whose perusal of them would most benefit the public. The resolution also provides that these specifications and drawings shall be furnished to such public libraries as will pay for binding and transportation. The binding will cost the Government about one hundred and thirty dollars a year for each library supplied under this resolution. This provision will exclude them from nearly all places except the larger cities. The only remaining provision for giving inventors, mechanics, and others any information of patented inventions is found in the clause that directs the Commissioner to have printed additional copies of specifications and drawings for sale to persons desiring to purchase; and subsequent legislation fixes the minimum price at which the specifications and drawings may be sold at ten cents per copy. This would make a full set, unbound, for one year, cost about thirteen hundred dollars, a sum which would be paid by very few.

Supposing that the larger portion of inventors, mechanics, manufacturers, and others, who are interested in the work of the Patent Office, would each feel a special interest only in the particular branch of industry in which he is engaged, the Office has caused a classified subject-matter index to be prepared, for free distribution. This index classifies the various subjects of inventions under one hundred and seventy-six different heads, according to the departments of industry to which they relate. By consulting this index persons are enabled to order the complete copies of all specifications and drawings of patents belonging to classes in which they feel special interest. This arrangement has been in operation only since the 1st of September last, and is not very generally understood. It results, however, in the sale of about one thousand copies per week. The sale would be largely increased by a reduction of the price to five cents per copy, which would pay the cost. I would recommend such reduction to persons subscribing for an entire class. For single copies the price should remain as it is. I would further recommend that where parties desire to purchase copies of the specifications and drawings of all the patents issued, the Commissioner be authorized to sell them at net cost. Still there would remain unsupplied a large demand for prompt, brief, and general information, in a compendious form, of all the patents issued and of all important deci-

sions and changes affecting the Office practice. To meet this demand to some extent, the Office is now publishing, under the authority of section 20 of the act of July 8, 1870, a Weekly Official Gazette, in which is given a name, index of the patentees, and a subject-matter index of all patents issued during the current week, a list of the designs patented and of the trade-marks registered, a notice of all pending applications for extensions and of extensions granted, a transcript of the claims of all patents issued, a notice of all disclaimers filed, all important decisions of the Commissioner of Patents, current decisions of the courts in trade-mark and patent causes, all changes in the rules of Office practice, modifications of patent law, special legislation affecting existing patents, and other official matter of interest to persons having business with the Patent Office. This is as far as the Commissioner feels authorized to go, under existing laws. All that seems necessary to enable this Official Gazette to supply the entire demand for information still unprovided for, is to authorize the Commissioner to add to it a well-considered abstract of the specifications and drawings upon which patents are issued. The subscription price of the Gazette has been fixed at five dollars per annum. It is believed that the addition of the abstract of the specifications and drawings will very soon so increase its circulation as to make it entirely self-sustaining without increasing the subscription price. Investigations and experiments are now being made that will very soon enable me to lay before the proper committees the additional cost of such additional work.

Under the provisions of section 14 of the patent act, I have sought to dispose of the models of rejected cases, by permitting regularly incorporated institutions of learning to select from among them such as they could make useful in teaching the practical sciences. The models thus selected have been carefully invoiced and receipted for by the institutions taking them, to be held subject to the order of the Commissioner of Patents. In this manner, about twelve thousand models of rejected cases have been disposed of, and a large number of colleges and polytechnic schools have been supplied with a valuable means of instruction. Any one of these models can be recalled, should it at any time be needed by the Office, or by the courts in the trial of patent causes. The act approved July 8, 1870, known as the Patent Act, has been carefully tested by fair trial, and in most particulars has been found sufficient and satisfactory. In some features, however, I would respectfully suggest that it should be amended.

Section 23 provides that every patent shall date as of a day not later than six months from the time the applicant or his agent was notified of its allowance. The same section further provides that the applicant may have, after said notice is sent him, six months in which to pay his final fee. The Office has not been in the habit of incurring the expense of having the drawings and specifications printed and prepared for issue until the final fees are paid, because, frequently the application is

abandoned after notice of allowance. It takes about two weeks to reproduce the drawings and specifications and prepare a case for issue. But applicants very often delay paying their final fees until the very last day of the six months allowed by statute for issuing the patent. The sections should be so amended as to require the final fees to be paid in at the Patent Office, or if the money be paid elsewhere, as provided in section 69, to require the proper evidence of such payment to be presented to the Office, at least two weeks prior to the latest date allowed for the patent to issue.

Section 24, considered in connection with section 30, gives to citizens of all governments the same rights and privileges before the Patent Office as are granted to citizens of the United States.

The spirit of this section is praiseworthy, and to the citizens of countries whose governments reciprocate with similar favors, it is unquestionably just. In other cases, however, the wisdom of this provision is by no means clear; citizens of the Dominion of Canada, under our general law, can obtain patents here on precisely the same terms as citizens of the United States; while the latter must have resided in Canada one year before they can apply for patents at the Canadian office.

The effect of this law, practically, is to exclude our citizens from obtaining patents in Canada; and often the result is disastrous to our inventors. The inventor, for instance, of a process or a machine for making a given article of manufacture, may suffer by the practice of the invention across the boundary line between the two countries by parties who furnish the manufactured article in our market at such rates as to be ruinous to the inventor. There can be no protection against this practice except in cases in which a patent can be obtained on the article of manufacture itself as well as upon the process or upon the machine by which it is made. But where the article itself is old, and therefore not patentable, the inventor of the new process or machine for making it is, by the means indicated, left practically without protection. It has been suggested in various quarters that, with view to furnishing the Canadian government a notice for modifying their practically prohibitory law, our own law should be so amended as to limit the rights granted by the sections above referred to, to the citizens of such foreign countries as accord to the citizens of the United States the same protection as is granted to their own citizens. I think, however, that the wiser course may be to open correspondence with the Canadian authorities, through the proper diplomatic channels, with view to representing the nature of the injustice to which our inventors are now subjected; and it is hoped that when the matter is thus brought home to the attention of the Canadian people, the proper remedy will at once be supplied. I withhold any special recommendation in the premises to await the result of such correspondence.

Section 25 provides that where a patent is first obtained in a foreign country, and afterwards here, the patent obtained here shall expire at

the same time as the foreign patent. This law is just and equitable in cases where the applicant is himself a citizen of a foreign country. In such cases his monopoly here should cease when it ceases at home. But in cases where the patentees are citizens of the United States, I see no reason for the rule. In most of the countries of Europe a patentee need not necessarily be an inventor. They will grant patents as well to the first man who *imports* an improvement as to the one who *invents* it. If the importer is the first to apply, he alone becomes the patentee. Hence it is frequently the case that persons other than the inventors will seize upon an invention the day it is patented here, and rush to Europe in advance of the inventors and secure to themselves the foreign patents. This fact often compels our inventors to secure their patents abroad first, if they would secure them at all. But under certain contingencies the foreign patents may expire in two, three, or five years. Under our law at present, their patents obtained here must expire at the same time.

Section 36, providing for the recording of assignments of patents, or territorial interests therein, I think, should be so amended as to provide in the same manner for the recording of licenses to manufacture or use under the patent. A patentee may cover the country all over with licenses to manufacture and sell under his patent, without having the records of the Office show that any portion of his patent, or any rights under it, have been conveyed. A person in purchasing an interest in a patent has no means but the veracity of the patentee for learning to what extent the patent is involved by licenses. For the protection of persons buying interests in patents all conveyances of any interests or rights of any kind should be made a matter of record, so that the Patent Office may be able to furnish reliable abstracts of title.

Section 48 provides that parties, except parties to interferences, if dissatisfied with the decision of this Commissioner, may appeal to the Supreme Court of the District of Columbia, sitting in banc. I see no good reason for making an exception of interference cases. If other cases are appealable, there is no reason why interference cases should not be. But I would respectfully suggest whether this whole matter of appeals from the Commissioner to the courts is not an anomaly in our Government. It is true that intricate questions of law are arising and being discussed daily in the Patent Office, and there is a show of propriety in permitting appeals to the courts on these questions of law; but I confess I can see no good reason for permitting such appeals on questions of fact. When the facts have been examined by a principal examiner, by the board of examiners-in-chief, and by the Commissioner in person, making three separate examinations by three separate tribunals, and all of these examiners supposed to be experts, and all agree as to what are the facts, an appeal to a court composed of able judges, but men not pretending to any expert knowledge of the subject-matter presented to them, it seems to me is not only without reason, but against reason. I would recommend that section 48 be repealed, and that in its

stead a section be introduced, authorizing appeals to the Supreme Court of the District of Columbia, sitting in banc, from the decisions of the Commissioner on questions of law; and that such appeals be in the nature of *writs of error*. If such amendment should be made, sections 49, 50, 51, and 52 should also be amended to correspond.

Section 53 provides that in applications for reissue the model and the drawing may be amended each by the other, but that neither shall be amended by the specification. This section works great hardship to inventors in many cases. I think it should be so amended as to authorize the Commissioner in person to permit, in applications for reissue either the specifications, drawings, or models to be amended so as to show what is already clearly shown in either one of them. The privileges granted by this section are, perhaps, more often misused than those of any other section in the patent law. The object of the section is to provide for the correction of errors that have arisen by inadvertence, accident, or mistake, and for such purpose it is very just and proper. Almost all applications under this section are for the purpose of obtaining broader claims than were originally asked for or granted. It not infrequently happens, however, that a patentee, finding that some other person has made a valuable improvement upon his invention, rushes back to the Office to secure a reissue of his patent in such form as to cover the later improvement. The Office, not knowing the facts in the case, and finding it possible so to construe the original application as to cover the improvement, the desired claim is granted, thereby giving the patentee a monopoly of what is really the invention of another. To guard against this species of fraud, I would suggest that section 53 be so amended as to require that a notice of all such applications for reissues as seek to enlarge the original claim be published in the Official Gazette for at least four weeks previous to the day set for examining the same; and that opposition be allowed as in extension cases.

It often happens that by a misapprehension of the law, or the facts, parties in good faith make joint application for a patent when only one was the real inventor; or the two were inventors of different parts so distinct as to be divisible, but the Office, not learning these facts in an *ex parte* examination, grants a patent to such parties jointly. Under the rulings of the courts such patents are worthless, giving no protection, and the inventor is without remedy. I would suggest that section 53 be further amended so as to make a misjoinder of parties in an application where no fraud was intended a good ground for reissue.

Under the law as it now stands, the courts hold that a patentee surrendering his patent for reissue, by such act of surrender relinquishes all his rights of action that may have accrued against infringers of the surrendered patent. This often works hardships and wrongs against inventors. I think it would be just to the patentee and equity to all concerned if the law could be so amended as to save rights of action in such cases where the claim infringed is substantially the same in the surrendered patent as in the reissue.

Section 64 requires that a notice of all applications for extension shall be published for at least sixty days in one paper in the city of Washington, and in other papers in the section of the country most interested adversely to the extension. There is no way in which the Office can determine what section of the country is most interested adversely to the extension of the patent. The practice has always been to advertise in the section where the patentee resides; but in a majority of cases probably that is not the location where those opposed to the extension would be most likely to see the notice. It very often happens that patents are extended before parties desiring to oppose know of the pendency of an application. There should be a single paper designated by law in which all notices of applications for extensions of patents are published. That would enable any person to learn of the pendency of such applications. I would recommend that section 64 be so amended as to require, in lieu of the publication now demanded, that all notices of applications for extensions be published in the Official Gazette of the Patent Office for at least six weeks prior to the day set for hearing. The Official Gazette is being taken by nearly every patent attorney and solicitor of patents in the country, and by very many inventors and manufacturers. Such publication would be certain in almost every case to reach all persons interested adversely to a proposed extension, and the saving thus effected in the expense of advertising would do something toward paying the cost of the Official Gazette. As the Patent Office is expected to be self-sustaining, it should be relieved of needless expense.

One-half of the fee in extension cases is by law required to be paid upon filing the application, and the balance upon granting the certificate of extension. The decision refusing or granting the extension is required to be made prior to the expiration of the original term of the patent. As the decision to extend carries the monopoly, the patentee frequently lets the certificate lie in the office for months and years, and sometimes for the whole term of the extension, without paying his final fee. If he needs the certificate of extension at any time to prosecute infringers, he then takes it; and as it bears even date with the expiration of the original term, it covers the whole term of the extension. If he should not need the certificate for such purpose, he may permit the extended term to expire and never pay his final fee. This fraud upon the Office should be provided against. I would suggest that section 66 be so amended as to authorize the Commissioner to withhold and cancel certificates of extension in cases where the final fees are not paid within thirty days of date of notice that extension has been granted.

Section 71 provides—

That any person who, by his own industry, genius, efforts, and expense, has invented or produced any new and original design for a manufacture, bust, statue, alto-relievo, or bas-relief; any new and original design for the printing of woolen, silk, cotton, or other fabrics; any new and original impression, ornament, pattern, print, or picture, to be printed, painted, cast, or otherwise placed on or worked into any article of manufacture; or any new, useful, and original shape or configuration of any article of manufacture, the same not having been known or used by others before his invention or production thereof, or patented or described in any printed publication, may, upon payment of the duty required by law, and other due proceedings had the same as in case of inventions or discoveries, obtain a patent therefor.

I am clearly of the opinion that the present mode of patenting designs is radically wrong, injurious to real inventors and the public, and not calculated "to promote the useful arts." Under section 71, the Office issues patents for mere changes in form or color, without regard to construction, function, or utility. This class of patents has been to some extent subversive of the fundamental object of the patent law. Very many design patents, which cannot, under the law, be denied, are a fraud upon the public. A man applies for a patent on a cultivator, or hammer, or any other useful tool or device, and finding himself fully anticipated in every principle and useful feature of his invention, abandons his application and at once applies for a design patent for the same thing. This application he bases upon some peculiarity of form or color, having nothing whatever to do with the merits or demerits of the article itself; and not being anticipated in these respects, a patent is granted for the new design. The patent gives him no protection whatever, except as to the form or color upon which it is based. He, however, obtains from the Office the right to stamp the word "Patented" upon the article he is manufacturing, and thereby deceives the public, wrongs inventors, and brings patented articles into disrepute. Patents have greatly increased in popularity within the last few years, and manufacturers regard it as an advantage to have the right to affix the word "Patented" upon the products of their shops and factories. This fact has led to very great abuse of the privileges granted by the section authorizing patents for designs. The protection of the public, and of true inventors, alike demands such modifications of the law as to distinguish widely between designs and inventions. Designs are in the field of taste, beauty, ornamentation; while inventions have to do with utility, resulting from new constructions and combinations. Designs look to esthetic effects, inventions to economical productions. Each has its proper sphere, but so distinct that they ought not to overlap each other in the Office practice. Each should be protected, but by instruments and marks easily distinguishable by the public. I therefore recommend such modification of the patent act as will place designs upon substantially the same basis as trade-marks. If a design is new, let the applicant have a certificate of registry, with authority to mark his productions "Registered" instead of "Patented." The fact is that a very large proportion of designs are used merely and solely as trade-marks. A man adopts a peculiar form or color for his articles of manufacture, that they may be known as his in the market; that he and his place of business may be pointed out by the peculiarity of the color or conformation. Such a modification of the law, I believe, would furnish ample protection to designs, and, in fact, would enable the Office to issue

certificates of registration in many cases where, from public policy, it now refuses design patents. I earnestly recommend early legislation on this subject.

By section 77, the right to apply for registration of trade-marks is limited to citizens of the United States and to residents of such foreign countries as "by treaty or convention" afford similar privileges to citizens of the United States. This restriction excludes residents of Canada and England, and perhaps other countries, which by statute, in the absence of "treaty or convention," afford the right of registry to citizens of the United States. I therefore recommend that this section be amended by striking out the limiting phrase, "by treaty or convention."

The discussion that has been going on in England during the past year, on the comparative merits of the English and American patent systems, has excited considerable interest in this country. The English system finds a few honorable and able advocates here, but a very large majority of inventors, and others intelligent upon the subject, seem to be ardently attached to our own system. The American system secures a preliminary examination by experts, on the question of novelty, and the issue of the patent is made dependent upon the result of such examination. Consequently, the patent, when issued, carries with it a presumptive right to its claims, and immediately has a value in the market; the amount of value depending principally upon the importance of the invention covered by the claims. The strength of the presumption in favor of the patent will, of course, depend upon the reputation the Patent Office may have for making honest and thorough preliminary examinations.

In England, patents are granted to every applicant, without any inquiry into the question of novelty or usefulness, and the patent is utterly without value until the patentee has, by litigation in the courts, established the fact that the invention to which it relates is new and useful. Unless an inventor is able to pay court costs, and liberal fees to attorneys and experts, he is much richer without a patent than with one. A poor inventor, under the English system, is entirely at the mercy of capitalists, and must, in general, assign a controling interest in his patent to secure the means to establish even a presumption in its favor.

The objections urged against the American system, so far as there is any validity at all in them, are chargeable, I believe, against the mode in which the system is organized and operated, rather than against the system itself. The more thorough and searching the preliminary examination, the more valuable will be the patent when issued. The better the organization of the Office to secure such examinations, the greater will be judicial and public confidence in the validity of patents. To secure the best possible organization for this purpose is a matter of the highest consideration. That the present organization of the examining corps has some radical defects, cannot be denied. That these defects can, in a great measure be remedied, I feel very confident. On this subject, I propose

soon to address a communication to the Honorable Secretary of the Interior, and, if it meets his approbation, it will probably be forwarded to Congress, with such suggestions as he may be pleased to make.

Protection to inventors is encouragement to every branch of industry. Such protection has already placed our country far in advance of all others in the development and adaptation of labor-saving machinery. In addition to this class of wealth which inventors have contributed to the country, they have paid, directly, the entire cost of our patent system, and three-fourths of a million dollars in excess. They do not now ask that the fees shall be reduced, nor that the excess shall be returned, but they do demand that the organization of the Office shall be such as to do better work, and that the force be made sufficient to do it more promptly.

On these matters I would recommend cautious but liberal legislation.

Respectfully submitted.

M. D. LEGGETT,
Commissioner of Patents.

PATENTEES AND PATENTS.

Compass-joint	T. Alteneder	111, 715
Compass, Liquid	J. and G. H. Bliss	111, 169
Compass, Ships'	G. W. Wood	112, 999
Compass, Solar	R. S. Lyman	117, 184
Composition for fire-brick	E. F. Rogers	119, 723

Alphabetical list of inventions—Continued.

Invention or discovery.	Name of patentee.	No.
Composition or soap for cleaning the teeth	J. O. Draper	115, 719
Composition, Roofing	J. H. Smyser	113, 588
Composition, roofing, Machine for the manufacture of	J. J. Wiggin	113, 604
Compound, Disinfecting	G. Viqué	113, 890
Compound, Disinfecting	O. Oldberg	117, 671
Compound, Disinfecting	H. A. Tilden	119, 250
Compound, Disinfecting	H. A. Tilden	121, 913
Compound, Explosive	J. Haffenegger	111, 642
Compound, Explosive	W. Mills	112, 163
Compound, Explosive	E. A. L. Roberts	120, 776
Compound, Explosive	E. Gomez	122, 245
Compound, Fertilizer	W. B. Hamilton	114, 133
Compound, Fertilizing	J. M. Lowenstein	111, 357
Compound for culinary use	H. W. Bradley	110, 626
Compound for destroying worms in the cotton-plant	T. W. Mitchell	110, 774
Compound for dressing and coloring the hair	J. N. Fallis	111, 443
Compound for filling or stuffing surfaces to be painted or varnished.	D. R. Averill	121, 311
Compound for kindling fires	J. L. Hannum and S. H. Stebbins	112, 337
Compound for liver and other diseases	C. A. Simmons	117, 338
Compound for stove-polish	R. E. Cherrington	110, 894
Compound for treating rheumatism, &c	W. H. Farrar	113, 995
Compound, Lubricating	J. H. Smyser	110, 690
Compound, Lubricating	E. Dyer, jr	111, 441
Compound, Lubricating	V. Purdy	112, 489
Compound, Lubricating	A. Millochan	115, 342

Compound, Medical	A. F. Shannon	116, 875
Compound, Medical	G. W. Chambers	118, 686
Compound, Medical	B. Gutierrez	118, 714
Compound, Medical	J. L. A. Crense	121, 338
Compound, Medical, for consumption, &c	T. W. Bethel	119, 301
Compound, Medical, for kidney diseases	R. Hawkins and A. A. Hill	117, 537
Compound, Medical, for the cure of cutaneous diseases	E. A. Shewell	121, 205
Compound, Medical, or corn-salve	J. McKee	119, 468
Compound, Medical, or cough-sirup	B. F. Burroughs	115, 698
Compound of vegetable alkaloids, Medical	G. W. Scollay	122, 065
Compound or bitters, Medical	S. R. Whitlow	113, 713
Compound or bitters, Medical	W. T. Sherwood	113, 938
Compound or bitters, Medical	M. Holst	116, 310
Compound or bitters, Medical	A. M. Loryea	116, 846
Compound or coffee antidote, Medical	E. D. De St. Cyr	121, 665
Compound or eye-balsam, Medical	W. Klingbeil	116, 199
Compound or eye-wash, Medical	P. Paul	121, 467
Compound or liniment, Medical	G. S. Wood	112, 901
Compound or liniment, Medical	G. H. Fairchild	118, 706
Compound or liniment, Medical	T. B. Randell	119, 179
Compound or pile-ointment, Medical	A. M. Irwin	120, 879
Compound or salve, Medical	M. Huddleston	112, 920
Compound, Preserving, for the hands, &c	J. W. Osborne	111, 376
Compound, Roofing	H. Morrie	116, 983
Compound, Tanning	A. Hisey	114, 941
Compressing, straining, and molding plastic pyroxyline, Apparatus for.	J. Brockway	113, 735
Compression-bib	W. Young	117, 233
Concave for thrashing-machines	C. S. Hall	117, 410
Concaves, Device for cutting	H. C. Rosin	118, 489
Concrete, &c., Machine for mixing	S. Putnam and T. Burt	111, 000
Concrete for pavements, &c., Mixer and heater for preparing.	H. Franke	121, 351
Condenser and feed-water heater for steam-engines	J. Dilworth and J. C. Rogers	111, 916
Condenser, Steam	A. Cail	119, 817
Condenser for illuminating-gas, Friction	W. H. St. John and S. O. Rockwell	113, 463
Condenser for oil-stills	H. W. Faucet and T. McGowan	117, 873
Condenser for rectifying-apparatus	A. Feubert	118, 601
Condenser for steam-engines	W. Craig and H. L. Brevoort	113, 021
Condenser, Gas	I. N. Stanley	113, 942
Condenser or cooler for alcoholic and other liquids	J. R. Neil	119, 942
Condenser, Steam	W. Wright	116, 909
Condensers, Tube-fastening for	G. H. Reynolds	116, 098
Condenser, Surface	B. Holly	113, 668
Condenser, surface, Compound	W. A. Lighthall	116, 728
Confectioners' paste and other materials, Machine for making and breaking.	R. Duff	115, 039
Confectionery, Apparatus for the manufacture of	W. F. Goward	111, 638
Confectionery, Machine for mixing paste for	R. Duff	114, 423
Confectionery or cocoa-nut candy	H. N. and T. J. Harbach	113, 047

Alphabetical list of inventions—Continued.

Invention or discovery.	Name of patentee.	No.
Connecting-rod	J. W. Zinn	122, 095
Connection for railway-cars	J. R. Crabill	113, 633
Connector for telegraph-wires	G. W. Prescott	111, 246
Constipation, &c., Medical compound for treating	C. A. Simmons	121, 904
Consumption, Medical compound for cure of	J. E. Larkin	119, 620
Converting rotary into reciprocate motion by means of friction, Apparatus for.	R. Sammer	113, 891
Converting wood or other fibrous material into pulp, Machine for.	J. Bridge	115, 274
Cooking-apparatus	E. Sperry	117, 476
Cooking-apparatus	N. Gergen	121, 164
Cooking-apparatus, Steam	J. G. Covey	115, 437
Cooking stoves and ranges, Detachable magazine for	L. Bridge	112, 013
Cooler, Beer	C. W. Haug	111, 203
Cooler, Beer	G. M. Hassinger	115, 850
Cooler, Beer	C. L. Ridgway	118, 646
Cooler for liquids	J. W. Campbell, sr	114, 916
Cooler, Lard	A. E. Camp and C. L. Reid	119, 818
Cooler, Liquor	E. Wright	117, 712
Cooler, Milk	N. and R. E. Johnson	113, 302
Cooler, Milk	A. Northrop	113, 690
Cooler, Milk	J. F. Harly	115, 605
Cooler, Water	A. Putnam	111, 680
Cooler, Water	T. J. James	115, 736
Cooling and discharging beer and other liquids on draught, Apparatus for.	J. M. Heiss	116, 053
Cooling and preserving, Apparatus for	C. F. Pike	120, 667
Cooling and preserving milk and other liquids, Apparatus for.	D. E. and F. C. Somes	114, 985
Cooling-apparatus for beer, ale, &c	T. Bergner and S. Zeisse	115, 018
Cooling, freezing, and preserving solids, liquids, and gases.	D. E. Somes	112, 394
Coop for fowls	J. B. Smith	118, 494
Coopers' crose	V. Applegate, M. P. Jacobs, and S. F. Roby.	112, 205
Coopers' crose	J. F. Applegate and C. Feiock	114, 069
Coping	C. Wilcox	120, 223
Coping for walls	D. M. Sprogle	115, 653
Copper, Melting	J. Kints	119, 365
Copper, Welding	C. L. Schurr and W. G. Rehbein	121, 009
Cops in spinning-machines, Apparatus for sizing the initial coils of.	A. Pearson	116, 481
Copy-holder	H. R. Williams	112, 664
Copy-holder	A. P. Manard	121, 291
Copying-apparatus	W. J. Purcell	116, 351
Cord, Machine for covering	R. Lewis	113, 675
Cord, Machine for making	S. A. Boardman	118, 426
Cords or bands, Machinery for making	T. Unsworth and E. Whalley	118, 408
Core-barrel, Collapsing	W. Smith	111, 091
Cores, Collapsing	A. T. Brodie and R. R. Smith	111, 173
Cores, Supporting	R. B. Phillips	111, 775
Cork-cutting machine	G. Purves	118, 269
Cork-puller	C. T. Simpers	120, 830
Cork-screw attachment	W. Dickson	115, 585
Cork-screw, cork-puller, and can-opener combined	J. Harrison	117, 278
Corn and cotton scraper	C. Marsh, 2d	112, 161
Corn-dropper	J. H. Gross	111, 200
Corner for photographic plate-holders	J. L. Winner	120, 141
Corn-fodder, &c., Machine for cutting and grinding	B. and D. H. Harnish	118, 234
Corn-ground marker	F. B. Kendall	116, 838
Corn harvester	C. S. Stull	112, 191
Corn-husker	A. Merwin	110, 772
Corn-husker	E. H. Carver and G. M. Baker	113, 495
Corn-husker	J. Stengel and C. C. Davey	117, 011
Corn-husker	D. Sager	119, 654
Corn husker, Field	J. H. Whitney and W. W. Marsh	120, 689
Corn-husker, Hand	J. G. Johnson	117, 296
Corn-husker, Hand	C. M. O'Hara	117, 670
Cornice for window-curtains	W. Lloyd	122, 037
Corn, Machine for crushing	A. Bolander	118, 188
Corn, Machine for husking	J. Russell	112, 967
Corn, Machine for shelling	J. Miller and N. Dubrul	115, 227
Corn, Machine for shelling	H. Lippold	118, 139
Corn-marker	A. G. Brassfield	118, 584
Corn picking and husking machine	S. R. Kenyon	113, 174
Corn picking and husking machine	S. R. Kenyon	121, 384
Corn planter and cultivator, Combined	F. Underwood	112, 516
Corn planter and cultivator, Combined	E. Braggins	116, 678
Corn-planter and fertilizer-distributer, Combined	C. W. Barrick	117, 369
Corn-planter, Hand	J. M. Harrison	111, 202
Corn-planters, Seed-tube for	L. Scofield	116, 999

Furnace, Puddling	J. Neville	114, 465
Furnace, Puddling	S. Bunn	114, 641
Furnace, puddling, Rotary	W. Boynton	118, 674
Furnace, Refuse-burning	G. and B. J. Goodsell and J. Been, jr	116, 829
Furnace, Reverberatory	J. Davis	114, 774
Furnace, Reverberatory, and heating rims of car-wheels.	T. W. Lyon	114, 696
Furnaces and stoves, Draught-regulator for	F. E. Chatard, jr	122, 105
Furnaces, &c., Blast by steam-jet for	P. W. Mackenzie	114, 163
Furnaces, Apparatus for distributing and feeding powdered fuel to.	T. R. Crampton	111, 615
Furnaces, Apparatus for feeding pulverized fuel to	T. R. Crampton	111, 614
Furnaces, Apparatus for feeding fuel into	J. Y. Smith	120, 007
Furnaces, Apparatus for feeding pulverized fuel to	J. Y. Smith	120, 640
Furnaces, Apparatus for feeding pulverized fuel to metallurgic and other.	J. Y. Smith	120, 008
Furnaces, Apparatus, for feeding with fuel	G. F. Deacon	116, 165
Furnaces, blast, Apparatus for feeding	L. S. Goodrich	115, 305
Furnaces, blast, Construction and mode of working	H. Bessemer	117, 246
Furnaces, Drop-grate for	W. Shepherd	118, 062
Furnaces, Feeding sawdust to	A. J. Emlaw	120, 052
Furnaces, Locomotive-boiler	A. J. Stevens	111, 884
Furnaces, metallurgical, Construction and operation of.	H. Bessemer	117, 250
Furnaces, metallurgic, Lining for	J. Y. Smith	120, 006
Furnace, Soldering	C. Seimel	113, 803
Furnaces, Protecting the hearths of	H. W. Ellicott	110, 639
Furnaces, Puddling and other	J. A. Jones, R. Howson and J. Gjers	114, 151
Furnaces, Puddling and other	A. Pollock	119, 182
Furnaces, puddling and other, "Fix" for	A. Reese	114, 854
Furnaces, Removing slag from	J. Thomas	111, 789
Furnaces, Smoke-jack for	R. F. Smith	118, 883
Furnace, Steam-boiler	G. H. Diehl	121, 933
Furniture, Composition for painting and staining	H. K. Wilson	120, 605
Furniture, Extensible	J. M. Dennis	121, 396
Furniture-pad	D. H. Cook and H. Winsen	112, 686

Gag, Animal	W. H. H. Hallock	120, 063
Gaiter	P. E. Clark	113, 230
Gaiter-pattern	S. Hodgins	121, 367
Galvanic battery	E. A. Hill	114, 606
Game-board	G. W. Kintz	118, 249
Games, Combination apparatus for	C. N. Hoyt	117, 789

Alphabetical list of inventions—Continued.

Invention or discovery.	Name of patentee.	No.
Game-signal	W. M. Tileston	116, 117
Gang-plow and cultivator, Combined	J. A. Medaris	111, 298
Gang-plow and cultivator, Combined	O. Sampson	112, 079
Gang-saw mills, Roll for	H. F. Snyder	115, 538
Garden-bed border	J. E. Dickson and S. Richmond	113, 145
Garden-tool for trimming sods	A. Tournier	117, 485
Garden-walks, Machine for cleaning	P. Boice	112, 019
Garments, Adjustable and detachable strap for	S. L. Clemens	121, 992
Garments, Adjustable and detachable strap for	H. C. Lockwood	122, 038
Garments, Apparatus for fitting and laying out	W. H. Mayer	121, 642
Garments, Attachment for producing sleeves and cuffs of	J. C. Reed	120, 334
Garter, Metallic	H. A. House	112, 344
Gasalier	J. H. Seaman	116, 356
Gasalier	J. H. Seaman	116, 359
Gasalier	J. H. Seaman	116, 360
Gas and air, Apparatus for carbureting	S. Whitney	115, 798
Gas and air, Carbureter for	M. P. Coons	116, 563
Gas and other lights, Apparatus for igniting	W. Klinkerfues	114, 950
Gas and other lights, Apparatus for igniting	W. H. Smith	115, 373
Gas and smoke-consuming apparatus	G. Marlow	120, 299
Gas, &c., Apparatus for exhausting	R. Laidlaw and J. Thomson	114, 156
Gas and water fittings, Machine for tapping	C. B. Long	113, 314
Gas and water pipe, Coating	N. Clute	112, 786
Gas-apparatus	A. L. Bogart	110, 729
Gas-apparatus	R. Morton	118, 967
Gas-apparatus for carbureting and generating	F. A. Fisher	112, 026
Gas by electricity, Apparatus for lighting and extinguishing.	J. P. Tirrell	121, 302
Gas, Apparatus for lighting by electricity	J. Vansant	120, 469
Gas, Apparatus for the manufacture of	E. Jones	122, 025
Gas-apparatus, Portable	G. Lowden	120, 590
Gas-brackets, Connecting joint and cock of	L. Hull	118, 723
Gas-burner regulator	W. Jones	120, 883
Gas by electricity, Apparatus for lighting and extinguishing.	J. P. Tirrell	121, 301
Gas, carbonic-acid, Apparatus for generating	J. D. O'Donnell	117, 805
Gas, coal, Apparatus for the manufacture of	W. Gibson	119, 135
Gas-cocks, Apparatus for automatically opperating	S. Gardner, jr	118, 008
Gas, Composition to render fabrics impervious to	G. L. Burnham	120, 386
Gases, Apparatus for extinguishing and purifying	P. Munzinger	118, 472
Gases, Apparatus for purifying	A. F. Havens	118, 609
Gases from petroleum, &c., Apparatus for generating	A. I. Ambler	118, 575
Gas-fitting	G. Rosenthal	120, 329
Gas-flame expander	H. Whitney	120, 139
Gas from hydrocarbons, Producing	X. Moussard	113, 192
Gas from retorts, Apparatus for exhausting	S. Trumbore	115, 786
Gas from solid carbon, Producing	L. Stephens	112, 089
Gas-furnace and forge	J. R. Morris	120, 764
Gas-generating and blast-heating apparatus for metallurgic and other purposes.	J. D. Whelpley and J. J. Storer	111, 286
Gas, hydrocarbon, Manufacture of	F. A. Sabbaten	116, 994
Gas, hydrogen, Apparatus for generating and carbureting.	H. C. Terry	118, 983
Gas, illuminating, from petroleum, Manufacture of	W. C. and G. W. Wren	120, 409
Gas, illuminating, Manufacture of	S. Hevner	114, 550
Gas, illuminating, Manufacture of	A. S. Cameron and W. E. Everett	114, 642
Gas, illuminating, Manufacture of	F. King	117, 645
Gas, illuminating, Manufacture of	J. Kidd	119, 034
Gas, illuminating, Manufacture of	D. Davison	119, 329
Gas, illuminating, Manufacture of	T. G. Springer	121, 079
Gas-jets, Apparatus for lighting by induced currents of electricity.	A. L. Bogart	119, 561
Gas-joint for extension drop-lights, Sliding	C. Deavs	113, 447
Gas-packing	W. W. Girdwood	119, 027
Gas-light apparatus, Electro-magnetic	A. N. Allen and R. H. Dewey	119, 492
Gas-lighter, Automatic	A. N. Allen and R. H. Dewey	120, 226
Gas-lighter, Electric	A. N. Allen and R. H. Dewey	121, 308
Gas-lighting and extinguishing apparatus, Portable	J. Vansant	113, 370
Gas-lighting apparatus	E. D. McCracken	120, 083
Gas-lighting apparatus, Electro-magnetic	F. Heyl and P. Diehl	116, 954
Gas-lighting apparatus, Magneto-electric	A. N. Allen and R. H. Dewey	116, 660
Gas-lights, Means for extinguishing	C. H. Harwood	118, 239
Gas-machine	T. G. Springer	112, 975
Gas-machine	W. A. Simonds	114, 558

Leather, Machine for dressing	J. P. Friend	117, 877
Leather, Machine for finishing	J. Perkins and G. L. Newcomb	122, 130
Leather, Machine for removing grease from	A. Eggleston	113, 863
Leather, Machine for piercing	J. G. Curtis	115, 445
Leather, Machine for rolling	N. Linsley	121, 309
Leather, Machine for rolling	J. C. Parmerlee	117, 931
Leather, Machine for scouring and stretching	D. Harrington	114, 900
Leather, Machine for scouring, polishing, and glossing	A. Cochran	113, 631
Leather, Machine for splitting and skiving	E. S. Hidden	116, 055
Leather, Machine for tearing up	S. B. Jenks and F. A. Holcomb	111, 214
Leather, Manufacture of	F. Walton	111, 100
Leather, Manufacture of artificial	L. Wolfsen	119, 291
Leather, Ornamenting

Lightning-rod	M. D. Phelps	122, 055
Lightning-rod	C. P. Snow	122, 390
Lightning-rod connection	A. Coddington	119, 323
Lightning-rods, Machine for making	G. S. Knapp	119, 987
Lightning-rods, tubular, Machine for joining	G. S. Knapp	116, 453
Limb, Artificial	S. B. Kepperling and T. B. Kreiter	115, 065
Lime, Manufacture of acetate of	C. J. T. Burcey	118, 787
Lime, unslacked, Protecting-apparatus therefor	H. Biabing	118, 660
Line-connector	C. Jarvis	122, 021
Line-holder	J. D. Sater	121, 006
Line-holder and wardrobe-hook, Combined	C. Goddard	118, 361
Line holder, Mackerel	E. L. Decker	118, 326
Lining for safes, Electric	E. Holmes and H. C. Roome	120, 874
Lining oil-barrels	M. G. Huntly	121, 106
Lining walls with felt, &c	J. Phillips	112, 376
Link	J. H. McIntire	121, 725
Link for chain-couplings	S. F. Lamb	121, 225
Link-joint for watch-chains	C. B. Carpenter	120, 850
Liquid for galvanic batteries	V. Barjon	116, 917
Liquid for use in vapor-engines, Compound	J. A. H. Ellis	111, 329
Liquid-measuring apparatus	J. Schmidt	122, 195
Liquid-receptacle and funnel	W. H. Mumler	113, 786
Liquids, Apparatus for atomizing	A. M. Shurtleff	114, 482
Liquids, Apparatus for distilling and concentrating	C. C. Parsons	110, 997
Liquids, Apparatus for evaporating	J. Howarth	114, 205

Locomotive	I. P. Magoon	117, 308
Locomotive	J. Cooke	119, 013
Locomotive	W. D. Arnett	120, 160
Locomotive	R. S. Gilespie	121, 983
Locomotive-engines, Exhaust-mechanism for	W. A. Carns	119, 219
Locomotive head-light	A. Collins and J. Hardy	116, 372
Locomotive, Marine	S. Lee	114, 832
Locomotives, Automatic apparatus for operating the valve of the exhaust-pipe of	R. C. Huse, jr	113, 299
Locomotive smoke-stacks, Cone for	D. B. Strope	120, 835
Locomotives, Burning hydrocarbon on	A. C. Rand	119, 790
Locomotives, Conveyer of smoke and cinders for	A. M. Rodgers	114, 605
Locomotives, Conveyer of smoke and cinders for	A. M. Rodgers	119, 790
Locomotives, Driving-power for	W. D. Arnett	111, 603
Locomotive smoke-stack	E. A. Castellaw	113, 980
Locomotives, Smoke-stack for	L. Bell	115, 153
Locomotives, Smoke-stack of	E. H. Winchell	119, 808
Locomotives, Spark-arrester for	F. Kearney and L. F. Tronson	113, 528
Locomotives, Spark-arrester for	B. Garvin	119, 928
Locomotive steam-engine, Method of operating	G. Gartner and C. Diebold	121, 864
Locomotives, trucks, and railroad-cars, Apparatus for lifting	G. T. Nutter	114, 328
Log-binder	W. L. Dean	118, 697
Log-cart	A. Kirkwood	118, 460
Log-rolling machine	J. Torrent	120, 290
Logs, Device for turning and canting	D. S. Griffes	115, 194
Logs for clapboards, Machine for sapping	E. Webber	116, 377
Logs in saw-mills, Machine for handling	E. H. Stearns	121, 299
Logs, Machine for rolling	J. Torrent	117, 017
Logs, Machine for turning	E. H. Stearns	117, 828
Looking-glasses and pictures, Device for hanging	D. Crowell, jr	115, 713
Loom	R. Elliott	110, 640
Loom	H. D. Davis	110, 904
Loom	H. E. Towle	111, 278
Loom	E. B. Hastings	111, 343

Loom for weaving hair-cloth	I. Lindsley	119, 277
Loom for weaving hair-cloth	I. Lindsley	119, 278
Loom for weaving hair-cloth and fabrics produced thereon	I. Lindsley	119, 276
Loom-harness, Machine for making	J. Sladdin	121, 258
Loom-harness, Machine for manufacturing	J. H. Crowell	117, 380
Loom-harness operating-mechanism	R. B. Goodyear	119, 459
Loom, Lappet	J. Clough and J. Crompton	112, 785
Loom-picker	J. M. Parker	111, 378
Loom-picker motion	J. C. Fisher	116, 251
Loom-picking apparatus	E. D. Gove	121, 359
Loom-picking motion	H. A. Whitten and E. D. Gove	111, 595
Looms, Automatic oiler for	J. Crook	122, 150
Looms, Box-operating mechanism for	H. Wyman	111, 417
Looms, Cloth-beam for	J. P. Hillard	117, 630
Looms, Harness-mechanism for	J. Booth	121, 842
Looms, Harness-operating mechanism for	G. Crompton	111, 324
Looms, Harness-operating mechanism for	O. Plummer	116, 969
Loom-shuttle	T. Isherwood	115, 614
Loom-shuttle	J. Lofendahl	117, 183
Loom-shuttle	E. A. Thissell	117, 220
Loom-shuttle	F. O. Tucker	119, 201
Loom shuttle-box mechanism	J. Ashworth	121, 838
Loom shuttle-box mechanism	J. M. Stone	121, 907
Looms, Let-off mechanism for	H. A. Remington	111, 002
Looms, Let-off mechanism for	T. Gorrell	114, 667
Looms, Let-off mechanism for	F. W. Graichen	117, 768
Looms, Let-off mechanism for	A. J. Woodman	120, 843
Looms, Let-off mechanism for	C. Schilling	121, 131

Oil, Still for	J. Gracie	117, 405
Oil, Still for	J. Gracie	117, 406
Oil-tank	G. W. Glass	120, 263
Oil-tanks, grain-cars, &c., Discharge-apparatus for	W. J. Brundred	115, 817
Oil-well drilling	J. R. Hill	112, 596
Oil-wells, Apparatus for steaming	W. Nevins	112, 060
Oil-wells, Crevice-searcher and cleaner for	W. Forker	115, 047
Oil-wells, Preventing the clogging of	E. A. L. Roberts	119, 883
Oil-wells, Process of preventing the clogging of	E. A. L. Roberts	119, 884
Oil-wells, Process of removing obstructions in	J. Dickey	120, 186
Oil-well tubings, Attachment to	W. W. Dewey	113, 638
Operating cutter for steam-plows	O. Hyde	111, 212
Ordnance	B. Britten	116, 408
Ordnance, Apparatus for discharging	H. Arden	120, 179
Ordnance, Breech-loading	J. Whitworth	120, 843
Ordnance, Mounting and working	A. Moncrieff	115, 502
Ordnance, Operating	J. B. Eads	112, 330
Ordnance, Projectile for	J. G. Butler	112, 121
Ordnance, Projectile for	B. Hotchkiss	112, 144
Ordnance, Recoil-obviator for	S. F. Hawley	118, 933
Ordnance, Repeating	A. H. Townsend	115, 650
Ordnance, Repeating	J. P. Taylor	116, 775
Ordnance, Submarine	D. Fitzgerald	121, 455
Ore-concentrator	W. C. Stiles	114, 486
Ore-crusher and amalgamator, Combined	L. Griswold	112, 804
Ore-crushing machine	S. Hughes	120, 972
Ores and other materials, Apparatus for separating and concentrating.	J. Jenkins	115, 737
Ores, Apparatus for dressing	C. F. Collom	118, 437

Alphabetical list of inventions—Continued.

Invention or discovery.	Name of patentee.	No.
Ores, Apparatus for amalgamating	J. Tunbridge	121, 827
Ores, Process and apparatus for the production of cast steel from.	C. W. Siemens	113, 584
Ores by means of fuel, chemicals, and fluxes, Treatment of.	J. D. Whelpley	116, 903
Ores, Desulphurising and treating	J. W. Bailey	117, 363
Ore-separator	W. Hooper	119, 918
Ore-separator	W. Hooper	119, 919
Ores, gold and silver, Process of amalgamating	P. T. G. Stockman	121, 554
Ores, Machine for separating and treating	S. R. Krom	121, 586

Paper-bag machine	M. E. Knight	116, 842
Paper-bag machine	J. M., J. P., and S. H. Bryant	119, 307
Paper-bag machine	B. S. Binney	119, 915
Paper-bag machine	J. Arkell	122, 009
Paper-board, Manufacture of	E. A. Seeley	114, 868
Paper box	P. Beer	114, 758
Paper boxes, Finishing	S. Wheeler and E. Jerome	112, 874
Paper-box machine	C. A. Maxfield	119, 631
Paper-box machine	H. R. Heyl	120, 436
Paper-calendering machine	S. Moore	121, 800
Paper-clip	J. M. Crull	113, 026
Paper cloth and other materials, Coating and decorating	F. Beck	110, 737
Paper collar	N. Evans, jr	112, 571
Paper collar	S. S. Gray	116, 948
Paper collars, Machine for cutting	A. L. Elliot	111, 113
Paper collars, Machine for patching, punching, and embossing button-holes of	C. Lang	112, 155
Paper, Colored	G. La Fonte, G. G. Saxe, and C. H. Clayton	121, 946
Paper, cordage, twine, &c., Manufacture of	J. H. McConnell	111, 061
Paper cutting and folding machine	C. Chambers, jr	113, 256
Paper cutting and folding machine	C. Chambers, jr., and W. Mendham	113, 257
Paper cutting and scouring machine	G. Bates	120, 097
Paper-cutting machine	J. R. Coffin	110, 631
Paper-cutting machine	G. Bates	111, 423
Paper-cutting machine	W. H. Topham	111, 708
Paper-cutting machine	S. Brown	112, 414
Paper-cutting machine	C. Paine	112, 693
Paper-cutting machine	T. C. Robinson	114, 350
Paper-cutting machine	J. Loviness	117, 650
Paper-cutting machine	G. A. Walker	118, 309
Paper-cutting machine	J. Arkell	118, 327

Paper-folding machine	R. R. Gubbins	120, 639
Paper-folding machine	R. R. Gubbins	121, 615
Paper for bank-notes, bonds, &c	J. M. Wilcox	115, 005
Paper for buildings	F. N. Davis	117, 155
Paper for napkins and other articles	E. Parrish	115, 511
Paper for packing	A. L. Jones	122, 023
Paper for paper collars, Surface-sized	W. F. Moseley	120, 765
Paper for photographic purposes, Mode of preparing	P. H. Murray	113, 327
Paper for telegraph purposes, Apparatus for perforating	G. Little	115, 969
Paper for use in the bottoms of bird-cages	J. H. Singer	111, 579
Paper-holder, Abrasive	G. A. Howe	122, 018
Paper-machine deckel	C. McBurney and L. Hollingsworth	118, 624
Paper, Marbleizing	T. Carson	118, 544
Paper-polishing machine	A. and G. T. Wright	110, 947
Paper-pulp	P. F. Schliecker	116, 759
Paper-pulp, Apparatus for manufacture of	M. L. Keene	114, 301
Paper-pulp, Beating-engine for preparation of	G. Ames	118, 092
Paper-pulp, Boiler or digester for making	W. F. Ladd	115, 397
Paper-pulp engines, Bed-plate for	P. Frost	116, 045
Paper-pulp, Machine for reducing wood for the manufacture of	J. Bridge	113, 488
Paper-pulp, Manufacture of	H. B. Meech	116, 979
Paper-pulp, Manufacture of	A. K. Eaton	119, 224
Paper-pulp, Manufacture of	M. L. Keen	119, 464
Paper-pulp, Manufacture of articles from	F. Curtis	110, 833
Paper-pulp, Manufacture of, from straw	C. M. Cresson	116, 033
Paper-pulp, Manufacture of, from straw, &c	J. A. Rothe	121, 130
Paper-pulp, Material for the manufacture of	H. V. P. Draper	119, 084
Paper pulp or stock, Manufacture of	M. L. Keen	119, 465
Paper-pulp, Preparing and bleaching	J. Campbell	116, 020
Paper-pulp, Process and apparatus for the manufacture of	H. B. Meech	116, 980
Paper-pulp, &c., Disintegrating vegetable fibers for	W. Riddell	117, 083
Paper-ruling machine	J. Tregurtha	114, 886
Papers, Cap and other	D. D. Foley and J. J. Johnson	120, 152
Paper-stock, &c., Machine for pulping wood for	B. F. Barker	119, 107
Paper-stock, &c., Treating tarred rope, cordage, and the like for the manufacture of	C. F. A. Simonin	119, 180
Paper-stock, Apparatus for boiling and treating	G. Sinclair	110, 873
Paper-stock from wood, &c., Process of obtaining	W. Adamson	117, 136
Paper-stock, Machine for washing and bleaching	H. Munroe	116, 338
Paper-stock, Manufacture of	W. Adamson	117, 134
Paper-trimming machine	W. P. Yeoman	111, 797
Paper-trimming machine	O. L. Starkey and E. W. Poston	120, 066
Paper-trimming machine	W. G. Ayres and S. L. Cole	118, 423
Paper-trimming machine	H. L. Todd	118, 965
Paper-washer	E. S. Hanna	119, 604
Paper, Wrapping	S. Wheeler	117, 355
Paper, wrapping, Manufacture of	B. E. Hale	119, 843

Sewing-machines, Caster for	B. F. Rider	112, 740
Sewing-machines, Caster for	H. Jones	115, 060
Sewing-machines, Caster for	F. H. Duncan	118, 117
Sewing-machines, Caster for	W. D. Hatch	119, 606
Sewing-machines, Caster for	G. K. Proctor	120, 098
Sewing-machines, Caster for	H. A. Skinner	120, 783
Sewing-machines, Check-lever for	J. B. Secor	121, 966
Sewing-machines, Clutch for feeding-mechanism for	E. McDonald and N. H. Cole	116, 618
Sewing-machines, Cord-guide for	H. Horn	112, 810
Sewing-machines, Cording-attachment for	W. H. Fowler and W. Pettingell	115, 048
Sewing-machines, Cording-attachment for	G. A. Colton and S. P. Babcock	117, 152
Sewing-machines, Cording-attachment for	H. C. Goodrich	121, 775
Sewing-machines, Cording-attachment to	N. and R. S. Barnum	114, 254
Sewing-machines, Cover and desk for	B. T. Loomis and J. A. Carey	113, 315
Sewing-machines, Cover and table for	F. R. Wolfinger	110, 711
Sewing-machine work-holder	H. Eddy	115, 288
Sewing-machines, Device for operating	G. W. Manson	120, 654
Sewing-machines, Device for securing hemmers to	H. M. Hall	119, 350
Sewing-machines, Electro-motor for	S. Jones	118, 537
Sewing-machines, Embroidering-attachment for	W. A. Mack	111, 071
Sewing machines, Embroidering-attachment for	A. W. Johnson	112, 601
Sewing-machines, Embroidering-attachment for	W. Carpenter	121, 332
Sewing-machines, Fan-attachment for	G. Thompson	115, 255
Sewing-machines, Fan-attachment for	T. Green	116, 303
Sewing-machines, Feeding-mechanism for	W. B. Higgins	111, 459
Sewing-machines, Feeding-mechanism for	R. M. Berry	112, 531
Sewing-machines, Feeding-mechanism for	T. Diehl and L. Oehring	115, 036
Sewing-machines, Feeding-mechanism for	C. Beuttel	115, 155
Sewing-machines, Feeding-mechanism for	E. P. West	116, 779
Sewing-machines, Feeding-mechanism for	D. M. Smyth	119, 246
Sewing-machines, Feeding-mechanism for	R. Blees	119, 690
Sewing-machines, Felling-attachment for	C. C. Blakemore	119, 814
Sewing-machines, Folding or tuck-laying device for	T. M. Farrand	115, 044
Sewing-machines, Friction-band and stop for	F. E. Whiteside	114, 071
Sewing-machines, Gathering-attachment for	W. A. Mack	111, 130
Sewing-machines, Gathering-attachment for	A. and W. T. Johnson	111, 456
Sewing-machines, Guide for	F. Herterich	112, 945
Sewing-machines, Guide for	C. Armstrong	119, 102
Sewing-machines, Guide for	W. H. Halladay	120, 966
Sewing-machines, Hemmer and binder for	M. Harris	121, 516
Sewing-machines, Hemmer for	C. Carleton	110, 737
Sewing-machines, Hemmer for	M. Harris	115, 197
Sewing-machines, Hemmer for	D. H. Darby	115, 268
Sewing-machines, Hemmer for	A. F. Colby	117, 604
Sewing-machines, Hemmer for	T. K. Ober	117, 669
Sewing-machines, Hemmer for	H. A. Ellis	119, 921
Sewing-machines, Hemmer for	D. Forrest	120, 868

Invention or discovery.	Name of patentee.	No.
Sewing-machines, Hydraulic and pneumatic motor for	J. H. and R. W. Welch	121, 441
Sewing-machines, Lamp-bracket for	H. Campbell	111, 813
Sewing-machines, Lamp-bracket for	R. S. Dennison	121, 089
Sewing-machines, Means for extending the tables of	A. Dickinson	121, 998
Sewing-machines, Means for mounting, upon their tables.	C. Parham	119, 784
Sewing-machines, Mechanism for operating	E. L. Howard	119, 930
Sewing-machines, Mechanism for operating attachments in.	J. W. Lyon	122, 298
Sewing-machines, Motive-power for	D. E. Stearns	115, 379
Sewing-machines, Motive-power for	D. T. Pittenger	115, 516
Sewing-machines, Motive-power for	H. S. Barnes	121, 745
Sewing-machines, Motor for	D. H. Sherman	118, 650
Sewing-machines, Motor for	J. A. Macauley	121, 532
Sewing-machines, Needle and holder for	G. M. Frary	112, 576
Sewing-machines, Needle for	O. L. Hopson and H. P. Brooks	116, 594
Sewing-machines, Needle-holder and tension-device for	E. L. Crumb	113, 027
Sewing-machines, Needle holding device for	J. B. Secor	121, 967
Sewing-machines, Needle setter and threader for	J. Karr	110, 855
Sewing-machines, Needle-sharpening attachment for	C. P. Clark	114, 265
Sewing-machine seat	S. A. Sexton	111, 762
Sewing-machine, Shuttle for	E. C. Thaxter	111, 275
Sewing-machine shuttles, Tension-mechanism for	J. W. Strange	116, 113
Sewing-machines, Plaiting-device for	W. Walker	110, 660
Sewing-machines, Presser and stitch-divider for	A. S. Woodward	110, 945
Sewing-machines, Presser-foot for	T. Hudson	114, 823
Sewing-machines, Presser-foot for	J. Wensley	116, 380
Sewing-machines, Presser-foot lifter for	T. W. Kennedy	122, 256
Sewing-machines, Ruffle-guide and band-holder for	E. L. Howard	113, 089
Sewing-machines, Ruffling and cording attachment for	M. J. Palmer	118, 145
Sewing-machines, Ruffling and hemming attachment for.	W. Johnson	116, 715
Sewing-machines, Ruffling-attachment for	F. B. Zay	112, 892
Sewing-machines, Ruffling-attachment for	E. J. Toof	118, 759
Sewing-machines, Ruffling-attachment for	E. J. Toof	120, 173
Sewing-machines, Ruffling-attachment for	G. W. Darby	120, 722
Sewing-machines, Ruffling-device for	E. L. Howard	120, 817
Sewing-machines, Scissors-grinding attachment for	R. S. Morse	121, 537
Sewing-machines, Shuttle for	F. W. Boland	110, 730
Sewing-machines, Shuttle for	G. M. Pratt	111, 678
Sewing-machines, Shuttle for	T. Colson	112, 195
Sewing-machines, Shuttle for	J. D. Moore	113, 490
Sewing-machines, Shuttle for	G. H. Lenker	116, 331
Sewing-machines, Shuttle for	J. C. Hervey	120, 377
Sewing-machines, Shuttle for	G. A. Fairfield	120, 731
Sewing-machines, Shuttle-threading device for	J. L. Borsch	119, 317
Sewing-machines, Stop for	J. B. Safford	118, 400
Sewing-machine stand	W. H. Grove	114, 435
Sewing-machines, Stud for suspending driving-wheels for.	R. H. McCann	118, 469
Sewing-machines, Table and drawer-attachment for	D. W. C. Breed	119, 963
Sewing-machines, Tension-regulator for	E. M. Estabrook	119, 599
Sewing-machines, Tension-roller for	J. McCarthy	115, 756
Sewing-machines, Thread-cutter for	J. A. Lord	118, 467
Sewing-machines, Thread-cutting device for	F. H. Furniss	116, 434
Sewing-machines, Thread-rack for spooling-attachments of	J. L. Demorest	121, 043
Sewing-machines, Treadle for	F. E. Mills	112, 102
Sewing-machines, Treadle for	A. Fontayne	116, 040
Sewing-machines, Treadle for	J. W. W. Gordon	116, 830
Sewing-machines, Treadle for	H. C. Smith	120, 401
Sewing-machines, Treadle for	J. B. Winslow	121, 976
Sewing-machines, Treadle for	H. A. Clark	122, 107
Sewing-machines, Tuck-creaser for	H. W. Fuller	112, 578
Sewing-machines, Tuck-creaser for	C. E. Robinson	114, 604
Sewing-machines, Tuck-folder for	O. D. and E. C. Woodbury	121, 020
Sewing-machines, Tuck-folding attachment for	R. G. Bush	121, 488
Sewing-machines, Tucking-device for	A. Morehouse	110, 670
Sewing-machines, Tuck-marker for	J. F. Kellogg	112, 050
Sewing-machines, Tuck-marker for	G. L. Du Laney	114, 270
Sewing-machines, Tuck-marker for	A. Shattuck	119, 304
Sewing-machine table	J. C. Cochran	116, 800
Sewing-machine table	F. R. Wolfinger	117, 359
Sewing-machine, Table and treadle for	S. W. Wardwell, jr.	121, 898
Sewing-machine treadle	L. W. Sapp	112, 184
Sewing-machine treadle	A. D. Lufkin	116, 464
Sewing-machine treadle	R. N. Allen	119, 668
Sewing-machine treadle	H. C. Smith	119, 734
Sewing-machine, Waxed-thread	H. P. Aldrick	113, 988
Sewing-machines, wax-thread, Tension-apparatus for	J. Kimball	117, 644
Sewing-silk, thread, &c	A. Turner	115, 661

Shoe	C. E. Tyler	114, 067
Shoe	E. S. Converse	115, 100
Shoe	N. J. Simonds	115, 648
Shoe	C. C. Geller	116, [illegible]
Shoe	G. C. How	116, 959
Shoe	G. B. Hall	118, 980
Shoe	R. Walcott	119, 307
Shoe	J. A. Rose and G. Mason	120, 460
Shoe and gaiter	F. P. Bussell	120, 852
Shoe and over-gaiter	T. R. Evans	113, 140
Shoe-bindings, Manufacture of	C. E. Morrill	121, 460
Shoe-fastening	E. Webb	116, 653
Shoe-fastening	F. D. Ford and E. D. McIntosh	117, 876
Shoe-fastening	F. Coeller	121, 757
Shoe-fastening	S. P. Tricott and G. A. Wheeler	122, 203
Shoe-fastening	J. Slatcher	122, 287
Shoe for horses, Temporary	W. H. Halsey	115, 311
Shoe, Gaiter	F. H. A. Hussey	117, 078
Shoe, India-rubber	C. Meyer and J. Evans	111, 962
Shoe, India-rubber	L. Elliott, jr	116, 936
Shoe, India-rubber	L. Elliott, jr	120, 258
Shoe, Infants'	W. M. Carpenter	114, 961
Shoemakers' foot-measure	W. Wilson	118, 414
Shoemakers' Foot-measure for	J. McNichol	115, 761
Shoemakers, Shoulder-tool for	C. Malhoit	118, 080
Shoe-pegs, metallic, Machine for making	T. T. Prosser	116, 319
Shoe-quarter, &c	S. Babbitt	121, 312
Shoe, Rubber	J. Letson	117, 897
Shoes and boots, Trimming-jack for	J. Webb, jr	117, 502
Shoes and boots, Wooden shank for	J. M. Watson	112, 754
Shoes for thrashers	D. W. Hollihan	111, 541
Shoe-shanks, Manufacture of	S. Moore	111, 863
Shoes, Jack-post for pegging	D. Bowker	116, 672
Shoes, Machine for shaping the soles of	E. Blaney	118, 185
Shoes, Machine for turning randa for	H. H. Bigelow	113, 009
Shoes, Mode of lasting	W. H. Lovejoy	112, 057
Shoe-sole	J. M. Hunter	114, 145
Shoe-soles, Machine for nailing	L. Goddu	120, 155
Shoe-soles, Machine for nailing with wire	L. Goddu	111, 837
Shoes, seamless, Manufacture of	C. W. Peeler and N. C. Johnson	117, 811
Shooting-iron	W. A. Andrews	115, 350
Shortening for culinary uses	H. W. Bradley	120, 026
Shot-cartridge	S. W. Paine	111, 377
Shot-cartridge for breech-loading fire-arms	C. E. Sneider	116, 640
Shot-case and distributer	S. Booton	110, 625
Shot-charger	G. D., G. A., and J. T. Capewell	113, 130
Shot-gun	D. Smith	115, 370
Shot, Machine for making	W. W. Brigg	122, 103
Shoulder-brace	A. W. Beaman	117, 738
Shovel	R. Calhoun	121, 331
Shovel and post-hole digger, Combined	J. Thompson	116, [illegible]
Shovel, Coal	J. H. Farmer	117, 756
Shovel, Fire	I. W. Denning	112, 709
Shovel-handle	H. C. Trask	113, 709
Shovel-handle	F. Alsip	120, 607
Shovel-handles, Machine for making	H. B. Butterfield	121, 374
Shovel, Sifting	T. F. Rooney	112, 678
Shovel, Snow	A. Q. Adams	110, 895
Show-case	J. A. Hughes	112, 718
Show-case	G. A. Hearn	113, 660
Show-case	W. H. Grove	115, 195
Show-case	G. A. Hearn, jr	116, 306
Show-case	W. H. Grove	120, 758
Show-case and counter	W. Cooper, jr	116, 364
Show-case, Refrigerating	T. L. Rankin	112, 493
Show-case, Revolving	W. J. Scott	111, 980
Show-cases, boxes, &c., Corner socket for	J. W. Truby	117, 831
Shower-bath apparatus	C. P. Brown	112, 217
Show-stand	W. Fisher	115, 456
Shutter-fastener	E. A. Goodes	110, 913
Shutter-fastener	J. L. Devol	112, 225
Shutter-fastener	P. L. Weimer	112, 756
Shutter-fastener	C. Pabst	112, 640

Alphabetical list of inventions—Continued.

Invention or discovery.	Name of patentee.	No.
Shutter-fastener	J. D. Phyfe and J. D. Perrine	114, 037
Shutter-fastener	P. Keffer	115, 063
Shutter-fastener	J. W. Megaw	115, 762
Shutter-fastener	J. S. Lash	115, 965
Shutter-fastener	E. F. Reed and J. C. Grundy	119, 180
Shutter-fastener	J. F. Smith	119, 479
Shutter-fastening	P. T. Share	110, 686
Shutter-fastening	A. P. Seymour	115, 364
Shutter for hot-beds, &c	J. Weed	119, 805
Shutter-worker	H. H. Barr	114, 748
Shutter-worker	F. Strattner	114, 875
Shutter-worker	J. W. Jedkins	115, 616
Shutter-worker	L. H. Watson	117, 926
Shutter-worker	C. M. Brown	118, 190
Shutter-worker	A. Brown	119, 304
Shutter-worker	L. B. Kenney	120, 981
Shutter worker	J. T. Pope	122, 056
Shuttle-binder, Adjustable	N. J. Allen and J. C. Moody	111, 508
Shuttle drop-box mechanism	J. Dyson	117, 523
Shuttle, Loom	E. H. Graham	116, 435
Shuttle, Loom	F. O. Tucker	118, 405
Shuttle, Loom	F. O. Tucker	121, 369

Sifter, Flour	W. B. Nichols	114, 961
Sifter, Flour	C. Richardson	121, 197
Sifter, Sand	W. Bailey	111, 604
Sifting-machine	B. N. Lampman	116, 457
Sign	J. Harrison	114, 811
Signal-apparatus, Electro-magnetic	A. Hahl	112, 242
Signal-apparatus for railroads, Electro-magnetic	T. S. Hall	118, 606
Signal-apparatus, Railway	W. Green	116, 831
Signal-box for fire-alarm telegraphs	S. Chester	112, 017
Signal for railroads	J. Fogarty	113, 756
Signal for railroad-trains	D. L. Schonberg	121, 901
Signal-house, Electro-magnetic	T. S. Hall	121, 870
Signaling-apparatus, Pneumatic	W. Foster, jr	113, 646
Signaling-apparatus, Pneumatic	W. Foster, jr	113, 647
Signal-light	A. M. Holmes	118, 941
Signal, Milkmen's	R. B. Blake	116, 014
Signal, Railway	C. D. Tisdale	122, 302
Signal, Railway-switch	A. W. Cram	115, 936
Signal, Telegraph	W. H. Ward	121, 561
Sign, &c., Suspending	J. H. and C. W. Crane	113, 403
Sign for street-lamps	W. Graham, W. Snyder, and P. O'Brien	121, 614
Sign for street-lamps	J. T. Foley	121, 938
Sign, Metallic	S. C. Collis	114, 927
Signs in paint, Process for producing	A. Brandon	117, 370
Silicon-steel, Manufacture of	C. M. Nes	112, 068
Silk and thread, Machine for cleaning and finishing	C. L. Frink	121, 505
Silk and thread measuring apparatus	L. Dimock	114, 114
Silk, Machine for stretching	J. N. Leonard	116, 461
Silks and other textile fabrics, Printing	L. Prang	113, 343
Silk-winding apparatus	J. Macfarlane	116, 903
Silver-ore, Chloridizing	E. N. Riotte	113, 308
Silver-ores, Concentrating	S. T. Wren	120, 014
Sinking shafts and excavating tunnels and cuttings	J. Shelby and M. C. Bullock	115, 115
Siphon, Suction	E. de Lagillardaie	117, 750
Sirups and creams and soda-water, Apparatus for manufacturing	A. Piccaluga	120, 531
Sisal, hemp, and other grasses, Machine for cleaning	C. A. Deane	119, 826
Sizing for window-shades	W. Devine	117, 520
Sizing-machine	A. H. Sturgis	111, 153
Skate	M. Kinsey	113, 604
Skate	D. Kerr and A. E. Hovey	113, 003
Skate	W. H. Barker	113, 015

Alphabetical list of inventions—Continued.

Invention or discovery.	Name of patentee.	No.
Skate	B. M. Lank	115, 497
Skate	C. T. Day	116, 935
Skate-fastening	E. L. Fenerty	121, 092
Skate, Parlor	O. B. Oakley	115, 767
Skate, Parlor	C. Raitz	117, 399
Skein-twisting machine	T. Stibs	117, 318
Skewers, Machine for making	C. Andrews	113, 964
Skid and truck, Combined	J. M. Lane	116, 966
Skins and hides, Machine for scouring	E. Fitzhenry	119, 513
Skins and leather, Machine for whitening and shaving.	J. Hodgkinson	115, 473
Skirt	C. W. Peirce, jr	112, 993
Skirt-board	J. F. Nettleton	113, 195
Skirt, Hoop	A. Carter	113, 854
Skirt, Hoop	C. C. Carpenter	116, 411
Skirt, Hoop	T. S. Sperry	116, 507
Skiving-machine	J. H. Mudgett	121, 867
Sky-light	C. S. Snead	112, 644
Sky-light, conservatory, and other glazed structures	G. Hayes	112, 594
Slate	W. F. Basde	117, 964
Slate	F. D'Ossone	119, 332
Slate-cutting machine	W. H. Rayner	118, 816
Slate-frame	P. Lugenbell and W. A. Ford	113, 670
Slate-frame	W. W. Hamilton	114, 280
Slate-frame	W. N. Bartholomew	116, 130
Slate-frame	W. Knight	119, 368
Slate-frame	H. M. Clay	120, 030
Slates, Machine for dressing and punching	J. Jaeger	113, 672
Slate-washer	F. W. Porter	118, 150
Slat for window-shades	J. Shorey and W. D. Butler	114, 209
Slat-matting for car-floors, &c	S. Lewis	118, 958
Sled-knee	C. Shaw	114, 357
Sled-knee	A. L. Shears	121, 673
Sleigh	R. Elliott	112, 566
Sleigh	A. Rank	112, 630
Sleigh	H. Smith	119, 660
Sleigh	R. Webb	119, 804
Sleigh	W. Leslie	121, 251
Sleigh-runner attachment to wheeled vehicles	Z. I. Pratt	113, 924
Sleigh, Self-propelling	C. H. Hudson	116, 191
Sleighs, Mode of propelling	C. H. Hudson	116, 313
Slide-bar for bridle-bits	A. P. Mason	115, 753
Slide for drawers	J. S. Gibbons	113, 871
Slide for extension-tables	J. Plenkharp	122, 278
Slide for suspenders	J. E. Smith	117, 694
Slide-valve for steam-engines, Balance	G. W. Richardson	111, 369
Sliding-door hanger	G. Ramsey	113, 697
Sling for hay-elevator	G. Smith	116, 231
Sling for packages	F. Hohorst	119, 765
Slop-hopper	J. G. Ils	117, 635
Slotting-machine	W. H. Warren	115, 795
Smelting or blast furnace	W. Ferrie	116, 698
Smoke and spark arrester and consumer	C. F. Pike	120, 686
Smoke-consumer	C. Plumb	119, 891
Smoke-consuming apparatus for fire-boxes	J. Durand	119, 630
Smoke-house	A. Waterman	113, 608
Smoke-stack	W. Toepfer	114, 985
Smoking-tobacco, Medicated	W. A. Wright	111, 711
Smoking-tobacco, Treating	W. A. Wright	111, 712
Smoothing and ruffling iron	A. R. Armstrong and C. S. Dudley	113, 730
Smut and wheat separating machine	W. H. Wash	111, 794
Smut-machine	T. Wallace and G. W. Hyde	115, 397
Smut-machine	J. Lantz	115, 620
Smut-mill and grain-cleaner	B. T. Trimmer	120, 012
Snap and buckle combined	P. A. Snyder	121, 015
Snow-shovel tip	E. Hubbard	111, 930
Soap	J. T. and P. S. Bever	114, 303
Soap	I. D. Balch	116, 008
Soap	F. M. Ellis	116, 821
Soap	G. Baker and I. Bullock	117, 728
Soap	C. R. Kircheser	119, 772
Soap, Apparatus for cooling and mixing	J. D. Sturges	114, 663
Soap, Composition for	R. Eastman	118, 440
Soap-compound	H. Loos	112, 950
Soap-cutting and beading machine	J. B. Ultsch	118, 304
Soap-dish	J. M. Thatcher	112, 983
Soap for polishing metals	E. A. Johnson	113, 536
Soap, Liquid	D. Cardullo	121, 930
Soap, liquid, Composition for	J. M. Rall	122, 281
Soap, Machine for mixing	C. Elling	119, 010
Soap, Manufacture of	J. Hoagland and C. McDonald	111, 454

Alphabetical list of inventions—Continued.

Invention or discovery.	Name of patentee.	No.
Soap, Manufacture of	D. H. Warren	116, 897
Soap, Manufacture of	W. Johnson	121, 787
Soaps, Composition for	J. E. Dotch	121, 044
Socket for connecting spokes and fellies	S. Mitchell	117, 799
Soda-water, Composition for the manufacture of	J. B. Wood	114, 502
Sofa, Folding	J. W. McDonough	116, 850
Soft iron and steel castings, Manufacture of	R. Yeilding	119, 682

Spark-arrester	W. M. K. Thornton	119, 544
Spark-arrester	S. and J. Greacen, jr	120, 050
Spark-arrester	D. R. Proctor	122, 056
Spark arrester and consumer for locomotives	G. H. Griggs	120, 638
Spark-arrester for locomotives	B. P. Freeman and P. Payton	113, 153
Spark-arrester for steam-boilers	J. Gates	120, 428
Spark-arrester, Locomotive	J. G. Armstrong	112, 310
Spavin, Compound for the cure of	W. J. Andrews	116, 135
Spectacle-clew for the sails of vessels	G. H. Creed	115, 896
Spectacle-frame	M. Reisley	116, 229
Speculum-attachment	J. D. Bruce	118, 083
Speed-recording apparatus	E. F. Sheltman	118, 100
Spelter, Process and apparatus for the manufacture of	J. E. Burrows	116, 551
Spike-extractor	W. S. Hough	111, 845
Spike-extractor	J. A. Bogert	115, 431
Spike-extractor	W. S. Hough	117, 420
Spike-extractor	W. H. Ives	119, 770
Spike-machine	D. Eynon	110, 755
Spike-machine	D. Eynon	110, 756
Spike-machine	F. Bruso	118, 429
Spike, Railroad	T. R. Timby	121, 023
Spikes, Combination of devices and furnaces for the manufacture of.	D. Eynon	120, 854
Spikes, Machine for making	J. H. Swett	111, 013
Spikes, Machine for making	O. A. Wadsworth	117, 198
Spikes, Machine for making	F. J. Kimball	116, 539
Spikes, Machine for making	M. Foster	119, 925
Spindle and bearing for spinning-frames	C. L. Austin	118, 423
Spindle-bearing	C. F. Wilson	113, 380
Spindle-bearing for spinning-machines	J. H. Sawyer	118, 968
Spindle-bearing for spinning-machines	J. H. Sawyer	119, 383
Spindle for spinning-machines	D. Hussey	119, 038
Spindle for clothes-wringer rolls	T. E. McDonald	119, 235
Spindle for loom-shuttles	A. Morton	117, 556
Spindle for safe-lock	M. G. Tousley	118, 830
Spindle for wringer-rollers	T. E. McDonald	113, 544
Spindle for wringer-rolls	T. E. McDonald	120, 207
Spindles, Device for holding spinning-bobbins on	G. Draper	116, 160

Alphabetical list of inventions—Continued.

Invention or discovery.	Name of patentee.	No.
Spindle-step	G. Draper	114, 536
Spindle-step	G. W. Knight and G. Draper	114, 570
Spinning, &c., Top roll for	W. A. Caswell	113, 140
Spinning-machine	S. M. and H. M. Williams	114, 074
